

## Press Release

**First time at the AGRITECHNICA 2009 –  
KTR presented the new combi coolers MMC as combined units to cool oil,  
water and air**

For the first time KTR presented the new MMC combi coolers at AGRITECHNICA completing the range of cooling systems. The new MMC (**M**obile **M**achinery **C**ooler) coolers are designed to specifically meet the demands of mobile applications in agricultural and construction machinery. Several elements can be cooled in one unit. This saves space and reduces costs.

Combi-coolers are used extensively in Mobile Hydraulic applications. Different elements such as Hydraulic Oil, Gear Oil, Charge Air and Cooling Water can be directed into a single, combined cooling system, which is customised to the required application. The size will vary according to the

specific thermal demands and the space available.
