

Rating: Particularly seaworthy DNV type-approval certificate for REVOLEX® KX and KX-D

7/2010

The quality of KTR couplings and components is well-known throughout the world. To assure you that every process covering both development and customer service satisfies highest demands, we had ourselves certified according to DIN EN ISO 9001 as one of the first companies in the field of drive technology in 1993. We do not only put this high demand of quality on our processes, but also on our products.

Couplings from KTR have been used in many industries including marine all over the world for many years. To make sure that the new **REVOLEX® KX** and **REVOLEX® KX-D** pin & bush couplings are able to be used in boat drives with higher performances, KTR were granted the type-approval for this range by DNV. The DNV type-approval for REVOLEX® KX covers the performance range from 6.500 Nm to 380.000 Nm. For smaller power ranges the ROTEX® jaw coupling has always been available. The ROTEX® jaw coupling is also DNV approved. Usual applications in the marine industry are bow rudders, windlasses and pumps

Convince yourself of our products' quality! You will find a list of the current certificates and product approvals on our homepage at www.ktr.com.

Should you have any questions about REVOLEX® KX or REVOLEX® KX-D or certification in general, please contact Mr. Michael Brüning:
