

Rating: specifically seaworthy DNV type approval certificate for GEARex®

5/2011

The quality of KTR couplings and components is well-known throughout the world. To assure you that all processes starting from the development to customer service meet with highest standards, we were certified in accordance with DIN EN ISO 9001 already in 1993 being one of the first companies in drive technology. We do not only set this high demand on quality on our processes, but also our products.

Couplings of KTR Kupplungstechnik have been used successfully among others in the range of boat drives on all seas in the world for several years already. To make sure that GEARex® all-steel gear couplings may be used on boat drives having higher power, KTR has been granted with the type approval certificate by DNV for this series. Thus, the DNV type approval certificate for GEARex® for the sizes 10 to 120 covers the nominal performance range from 930 Nm to 1,050 kNm. Typical applications in marine technology are, among others, bow thrusters, winches and pumps.

Convince yourself of the quality of our products! A summary of the existing certificates and product approvals as well as our leaflet for marine applications are shown on our website at www.ktr.com.
