

ROTEX® GS Compact

08/2009

ROTEX® GS is one out of three coupling types which KTR offers in the range of backlash-free shaft couplings. The particular benefits of this design are the easy assembly and the high power density.

KTR offers **ROTEX® GS Compact** as a low-cost design of the GS series. This backlash-free shaft coupling can be up to one third shorter than the standard **ROTEX® GS** and is offered with axial cut from size 24. Subject to its symmetrical arrangement **ROTEX® GS Compact** has a higher balancing quality compared to usual clamping hubs.

Finally the engineers of KTR Kupplungstechnik managed to further complete the product portfolio by an interesting modification of **ROTEX® GS** being in a leading position throughout the world.

KTR Kupplungstechnik GmbH will present this product along with other products being important for the industry on the occasion of this year's MOTEK in Stuttgart (taking place from 21.-24.09.2009, hall 9 / booth 9230) and the EMO in Milan (taking place from 05.-10.10.2009, hall 3P / booth H08). It will be best if you visit the KTR experts locally and have a look at important information on the Internet at www.ktr.com.
