

TOOLFLEX® 42

08/2009

KTR has extended its programme of TOOLFLEX® metal bellow-type couplings M, S, PI and KN by an intermediate size 42.

Once again this example has made obvious that the KTR engineers take the requirements of their customers serious and that they are in a position to react to changes in the market within short term. During the period between the TOOLFLEX® couplings sizes 38 and 45 it has become clear that the market demands for an intermediate size. With the new TOOLFLEX® 42 having a rated torque of 95 Nm KTR covers this intermediate range having extended its standard programme by an important component.

Please come to convince yourself of the large variety of products of KTR Kupplungstechnik GmbH.

On the occasion of the MOTEK in Stuttgart, taking place from 21.-24.09.2009 in hall 9 / booth 9230
